education  
(under and postgraduate)  
pain management:  
Pharmacological  
Anaesthesiological/surgical  
Rehabilitation  
Psychological  
Neuromodulation

Clinical beds for patients

# „Hospital without pain”

Postoperative pain management guidelines were developed in Poland in 2005 and updated in 2008 to address the well-documented problem of undertreatment of postoperative pain. The Polish Chapter of IASP, in co-operation with Polish medical societies of anesthesiologists, gynecologists, surgeons, and orthopedists, initiated the Pain-Free Hospital Project in September 2008 to introduce standardized postoperative pain management and certify hospitals which fulfill the required criteria.
