

Nurse-led Critical Care Outreach

How the service has developed at The National Hospital (NHNN)

Sandra Fairley Senior Nurse in Neurocritical Care sandra.fairley@uclh.nhs.uk

Critical Care Outreach Where it all began

Many critically ill patients are on wards – not just in ICU

- Physiological deterioration often not recognised or inadequately treated^{1,2,3}
- Patients recovering from critical illness need follow-up once discharged to the ward
- Advocated a hospital-wide approach to critical care

 Goldhill DR, White SA, Sumner A. Physiological values and procedures in the 24 hours before ICU admission from the ward Anaesthesia 1999; 54: 529-34
 McQuillan P, Pilkington S, Allan A et al Confidential inquiry into quality of care before admission to intensive care BMJ 1998;316:1853-58
 NCEPOD (2005) An Acute Problem? A report of the National Confidential Enquiry into Patient Outcome and Death; NCEPOD London

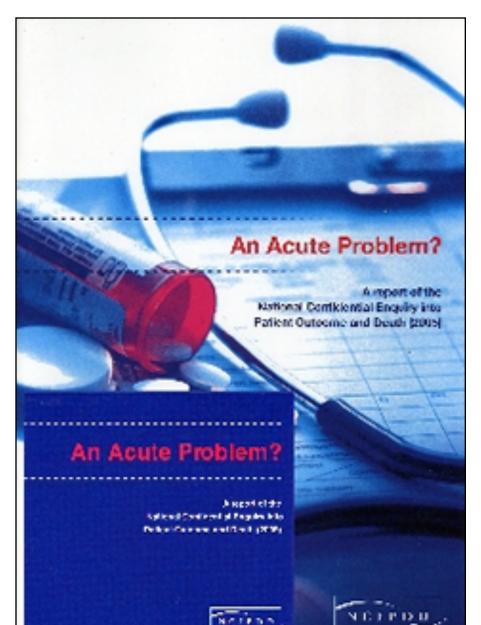

Comprehensive Critical Care

A REVIEW OF ADULT CRITICAL CARE SERVICES

2000 Department of Health review of adult critical care services

 Report recommended that all critical care units establish an Outreach Service

2005 National Confidential Enquiry into Patient Outcome and Death

- Recommended use of physiological track and trigger systems for inpatients throughout all UK hospitals
- Linked to response team skilled to assess and manage the clinical problems
- 24 hours a day / 7 days a week

2001

Set up Outreach service - to comply with DoH recommendations

- No additional resources, ICU nurse +/- ITU consultant made brief visits to wards
- 'Outreached' patients who had been discharged from ICU
- Averted some admissions / readmissions to ICU
- Enabled earlier discharge from ICU discharged patients with more confidence if we could provide some 'follow-up'

With 'dedicated' resources we could do better

2001 2008

Appointed 2 nurses with sole remit for Outreach Service
 Intensive care experience a requirement

- Established a Monday to Friday 9am 5pm service
- ◆ 513 patients 'outreached' in 1st year (1,356 visits)
 - Some patients required only 1 follow-up visit, others required visits over several days

Value of outreach service was by now well recognised

2001 2008 2010

Team increased to 3 nurses

Service increased to Monday to Friday 8am – 8pm

 2001
 2008
 2010
 2015

Team increased to 4 nurses

Service increased to 8am – 8pm / 7 days a week

◆ 993 patients 'outreached' in 2015

 2001
 2008
 2010
 2015
 2016

Team increased to 6 nurses

Service increased to 24 hours a day / 7 days a week

Critical Care Outreach Outreach Nurse role

Visit all wards each shift

- Assess patients on 'outreach list' + any patient referred to them
- Advise and assist ward team with patient management
- Make referrals to other teams (Pain Team, Physiotherapist, Palliative Care)
- 3 days / week Anaesthetic Consultant joins them to review 'sick' patients

ICU discharges

- Join ICU ward round to check on discharges each day
- Support transition to ward environment
- Key link in multidisciplinary team
 - Handover of 'sick' patients on wards to Senior Anaesthetist on duty

Critical Care Outreach Needs an 'ALERT' system

- Estimated 40% of deaths in acute hospitals preventable with earlier intervention
- 60-80% of in-hospital arrests show pre-monitory sign(s)
 Average duration of abnormal sign(s) 8 hours
- Physiological 'track and trigger' system needed to monitor patients in acute hospital settings
- Individual hospitals created own early warning systems but lack of consistency in how deteriorating patients identified

Setting higher standards

National Early Warning Score (NEWS)

Standardising the assessment of acute-illness severity in the NHS

- Systematic approach to assessing acute-illness severity
- Simple triggers for escalation of care
- Standardised NEWS training for all staff in UK

Clinical observation chart to be used throughout the NHS

Report of a working party July 2012

Introduction of NEWS How does NEWS work?

A score is allocated to 6 physiological measurements
 + oxygen therapy

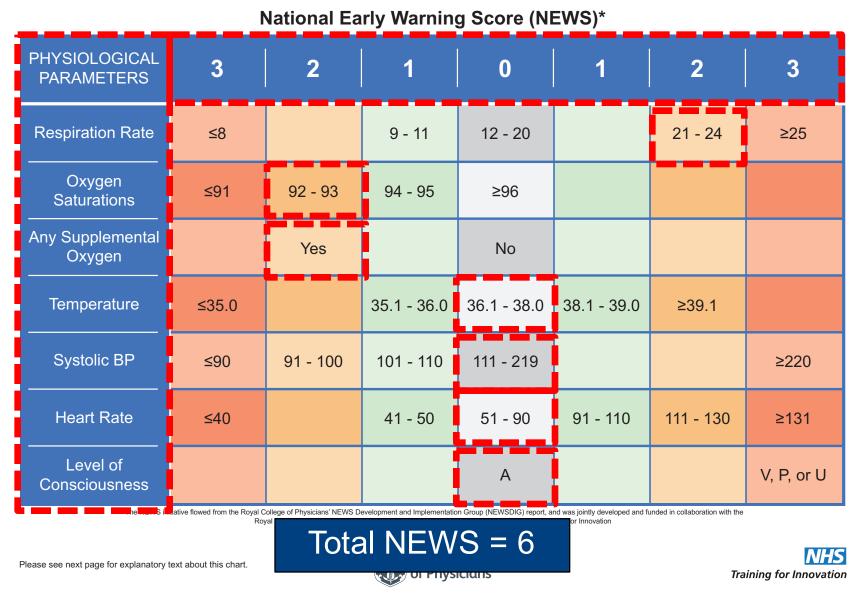

- Respiratory rate
- Oxygen saturation
- Temperature
- Systolic blood pressure
- Pulse rate
- Level of consciousness (AVPU)

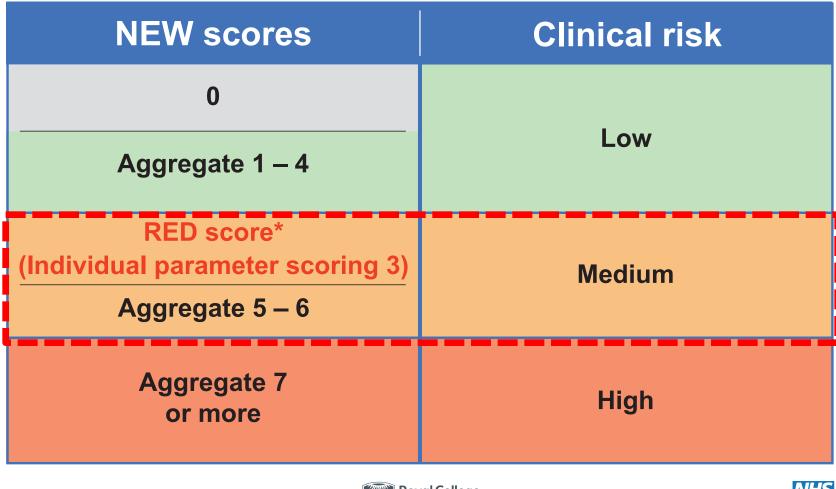

Alert Responds to Voice Responds to Pain Unresponsive

The more abnormal the measurement the higher the score

The six scores are aggregated to produce a total score

High scores alert nursing +/- medical team to escalate care

The National Early Warning Score (NEWS) thresholds and triggers

Please see next page for explanatory text about this chart.

NHS Training for Innovation

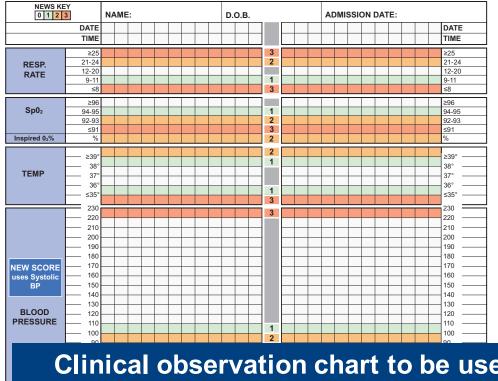

Outline clinical response to NEWS triggers

	time clinical response	to NEWS triggers
NEWS SCORE	FREQUENCY OF MONITORING	CLINICAL RESPONSE
0	Minimum 12 hourly	Continue routine NEWS monitoring with every set of observations
Total: 1-4	Minimum 4-6 hourly	 Inform registered nurse who must assess the patient; Registered nurse to decide if increased frequency of monitoring and / or escalation of clinical care is required;
Total: 5 or more or 3 in one parameter	Increased frequency to a minimum of 1 hourly	 Registered nurse to urgently inform the medical team caring for the patient; Urgent assessment by a clinician with core competencies to assess acutely ill patients; Clinical care in an environment with monitoring facilities;
Total: 7 or more	Continuous monitoring of vital signs	 Registered nurse to immediately inform the medical team caring for the patient – this should be at least at Specialist Registrar level; Emergency assessment by a clinical team with critical care competencies, which also includes a practitioner/s with advanced airway skills; Consider transfer of Clinical care to a level 2 or 3 care facility, i.e. higher dependency or ITU;

Please see next page for explanatory text about this chart.
